Jakob Edelstein

SOFTWARE DEVELOPER

I am currently employed as a software developer at a financial services company, where I work as part of an agile team specializing in designing and developing software products for leading firms in the finance and investment banking industry.

My current role involves developing an online benefits sales platform, as well as a tool for administering 401(k) accounts for institutional clients. Previously, I was involved in developing the user interface and API for a new securities trading platform, and maintaining several other high volume production applications

My strong attention to detail and continuous desire for learning and self-improvement have enabled me to grow rapidly and excel in my role. I thoroughly enjoy organizing, problem-solving, and devising robust solutions to challenging problems.

My ability to work independently and conduct research to find solutions has established my reputation as a reliable and capable developer. In addition, my effective communication and interpersonal skills have allowed me to collaborate seamlessly as part of a team, ensuring both smooth development processes and client satisfaction.

I'm constantly seeking opportunities to learn and enhance my skills, while delivering high-quality work that I can take pride in. My ultimate goal is to join a company that fosters continuous learning, provides exciting new challenges, and inspires me to achieve new levels of personal and professional growth.
